

ABSTRACT OF THE DISCLOSURE

There is provided a system that automatically displays and reproduces digital information recorded on a memory card by a simple user's action. When at least
5 one memory card is inserted into at least one card slot, a display mode is switched to a mode for automatically displaying one or more images by at least one manner in accordance with the number of inserted memory cards and/or the type of card. These images
10 indicate the recorded contents of the at least one inserted memory card.
